DESCRIPTION	<p>Evolution of Premier Tech in PA</p> <p>We will discuss the evolution of Premier Tech as a global company – our history, our development, and our other business units. Then we will focus on the evolution of our Water and Environment division here in PA. We will discuss the products we offer, how they are produced, and our new factory in Williamsport. We will also discuss design and application of our products, as well as best installation practices of our different models. After that, we will review operation and maintenance, as well as proper inspection procedures for PSMA inspectors, and for SEOs during permit review and field inspections. Lastly, we will touch on some product improvements, including some new products that we are launching, which will culminate with a tour of our production facility, where we will see a poly Ecoflo unit being produced. At the end of the tour, we will gather at the brewery for networking over lunch and drinks.</p> <p>For questions, contact : Barry Helverson helb@premiertech.com +1 570 369-0583</p>
